PROFESSIONAL SUMMARY

MERN Stack Developer who ships production features, not just tickets — currently running core modules of a **live HRMS platform** (employee management, RBAC, attendance) used daily inside a service-based delivery environment. Strong in REST API design, JWT authentication, RBAC, and MongoDB/MySQL data modeling. Track record of building **6+ full-stack applications** end-to-end — from schema design to deployed React UI — with a focus on clean, maintainable, audit-ready code.

TECHNICAL SKILLS

Frontend: React.js, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, ShadCN UI, MUI

Backend: Node.js, Express.js, RESTful APIs, Microservices Architecture, JWT Authentication, RBAC, Middleware Design

Database: MongoDB, Mongoose, MySQL, SQL (joins, query optimization), Relational Database Design

DevOps/Cloud: Docker, Kubernetes, AWS, GitHub Actions (CI/CD)

Tools: Git, GitHub, Postman, npm

PROFESSIONAL EXPERIENCE

MERN Stack Developer Intern (Full-Stack) | Stackup Pvt. Ltd.

April 2025 – Present

- Own and maintain **15+ RESTful API endpoints** in Node.js/Express powering a live HRMS used by **45 employees** across **5 departments**.
 - Built JWT-based authentication with 3-tier RBAC (Admin/HR/Employee), eliminating unauthorized data access across the platform.
 - Modeled and optimized MongoDB (Mongoose) and MySQL schemas for HR records, cutting query response time by **35%** through indexing and joins tuning.
 - Wrote reusable validation and error-handling middleware, reducing duplicate code across API routes by **25%** and cutting production bugs from malformed requests.
 - Paired directly with frontend engineers to ship React-integrated features on a live production system — zero rollback incidents to date.
 - Delivered core HRMS modules — onboarding, attendance tracking, role management, HR dashboards — now in daily use by the client's HR team.
-

PROJECTS

AI-Powered Price Comparison Platform — MERN E-Commerce Application

- Engineered an **AI-powered price comparison engine** that aggregates product listings across multiple e-commerce sources and ranks them by price, ratings, and delivery time.
- Applied **NLP-based product matching** to reconcile listings with differing titles and descriptions across sources, improving cross-platform comparison accuracy.
- Built a full checkout flow — auth, cart, and order management — on a self-designed REST API layer for products, users, and orders.
- Integrated MongoDB for persistent, production-style data storage across the app.

HRMS Platform (Human Resource Management System) — Live Production Project (Next.js & React.js)

- Deployed a live HRMS built with Next.js and React.js now managing employees, roles, and org data for **45+ users**; built and shipped independently alongside the internship team.
- Engineered 3-role JWT/RBAC system (Admin, HR, Employee) securing every API endpoint against privilege escalation.
- Built end-to-end onboarding, attendance, and employment-status REST APIs using Next.js API routes and React.js UI, replacing what was previously a manual/spreadsheet HR process.
- Designed relational + NoSQL data layer (MySQL/SQL + MongoDB) supporting real-time HR reporting.

PayNest — Banking-as-a-Service (BaaS) Platform (Next.js)

- Architected a modular fintech backend using Next.js with role-scoped protected APIs, built for extension into new banking products without rework.
- Implemented JWT authentication with Next.js API routes, securing user onboarding and dashboard data end-to-end.

Chat Application

- Built real-time authenticated messaging with persistent storage and protected routes.

EDUCATION

B.Tech — Anna University
First Class
